

NATIONAL PUBLIC SECTOR FRAMEWORK

For the provision of **TELECOMS SERVICES** and Associated Supplies and Services

REF: CPC/DU/TELE/16

4net Technologies has a long heritage of delivering successful communications services to the public sector, providing savings, choice and flexibility for all publicly funded organisations while ensuring compliance with the broader government technology strategy.

4net understands the significant challenges faced by Local Authorities - the need to balance budget cuts along with a requirement to improve efficiency and citizen contact. We work with our public sector customers by using technology to help them to transform their efficiencies, improve savings and enhance the customer experience, showing them how to leverage the benefits of their existing investments.

Our flexible and agile approach means that we work with your organisation to deliver an innovative solution that will help you to provide high quality, secure and efficient services to your citizens and your people.

We have invested heavily to ensure that we have the right people with the right skills to deliver our public sector solutions and are leading the way in technology solutions that support and enable public sector transformation – providing increased cost savings, efficiencies and agility.

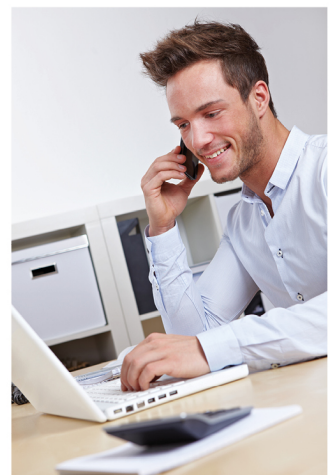

4net have been delivering their award-winning Unified Communications as a Service platform (UCaaS) 4net Agile Cloud to an increasing number of public sector organisations. These include their Central Government shared services solution named ANTENNA which provides a hosted and managed service to an end-to-end unified communications service, deployed via highly resilient and PSN accredited dual datacentres and scalable to over 350,000 users.

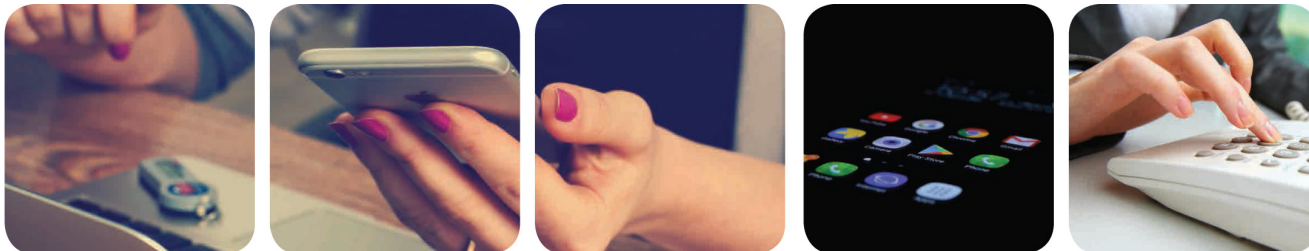

4net Agile Cloud provides innovative UC and Contact Centre services to local and central government organisations, which in turn drives simplicity, resilience and user productivity within their communications strategy.

The 4net Agile Cloud allows organisations to mitigate the risk and complexity of migrating services at a pace and structure to suit them and their customers. We provide a planned transition which allows migration to the cloud at a pace to suit your needs, offering hybrid deployments if you are not comfortable having all your services in the cloud.

Our public sector solutions will help you to make immediate cost savings by:

- Consolidating multiple networks and linking your systems and services
- Unified Communication systems and collaboration technologies such as video conferencing to support flexible working
- Increased connectivity that will connect people across your organisation
- The tools to analyse your data to help you target your resources where you need them most
- Give your people quick and secure access to information no matter where they are located, whether in the office, working from home or in remote locations on the device of their choice
- Reduce your office space and running costs to release revenues
- Put your citizens at the heart of your organisation to give them more control over the services you provide and the information they need

The framework provides added value throughout when compared with other Public Sector telecoms services frameworks. For example,

4net understands the significant challenges faced by Local Authorities - the need to balance budget cuts along with a requirement to improve efficiency and citizen contact. We work with our public sector customers by using technology to help them to transform their efficiencies, improve savings and enhance the customer experience, showing them how to leverage the benefits of their existing investments.

We have invested heavily to ensure that we have the right people with the right skills to deliver our public sector solutions and are leading the way in technology solutions that support and enable public sector transformation – providing increased cost savings, efficiencies and agility.

Our flexible and agile approach means that we work with your organisation to deliver an innovative solution that will help you to provide high quality, secure and efficient services to your citizens and your people.

4net have been delivering their award-winning Unified Communications as a Service platform (UCaaS) 4net Agile Cloud to an increasing number of public sector organisations.
